(This report was prepared by Jayme Parker, Public Health Microbiologist III at the Alaska State Virology Lab in Fairbanks, Alaska)

The Section of Epidemiology is the primary contact for consultation for the following potential active infections: rabies, norovirus, measles, mumps, rubella, varicella zoster, novel influenza, or novel coronavirus. Please direct your calls to the Epi-Team at 907-269-8000; or their 24 hour # 1-800-478-0084.

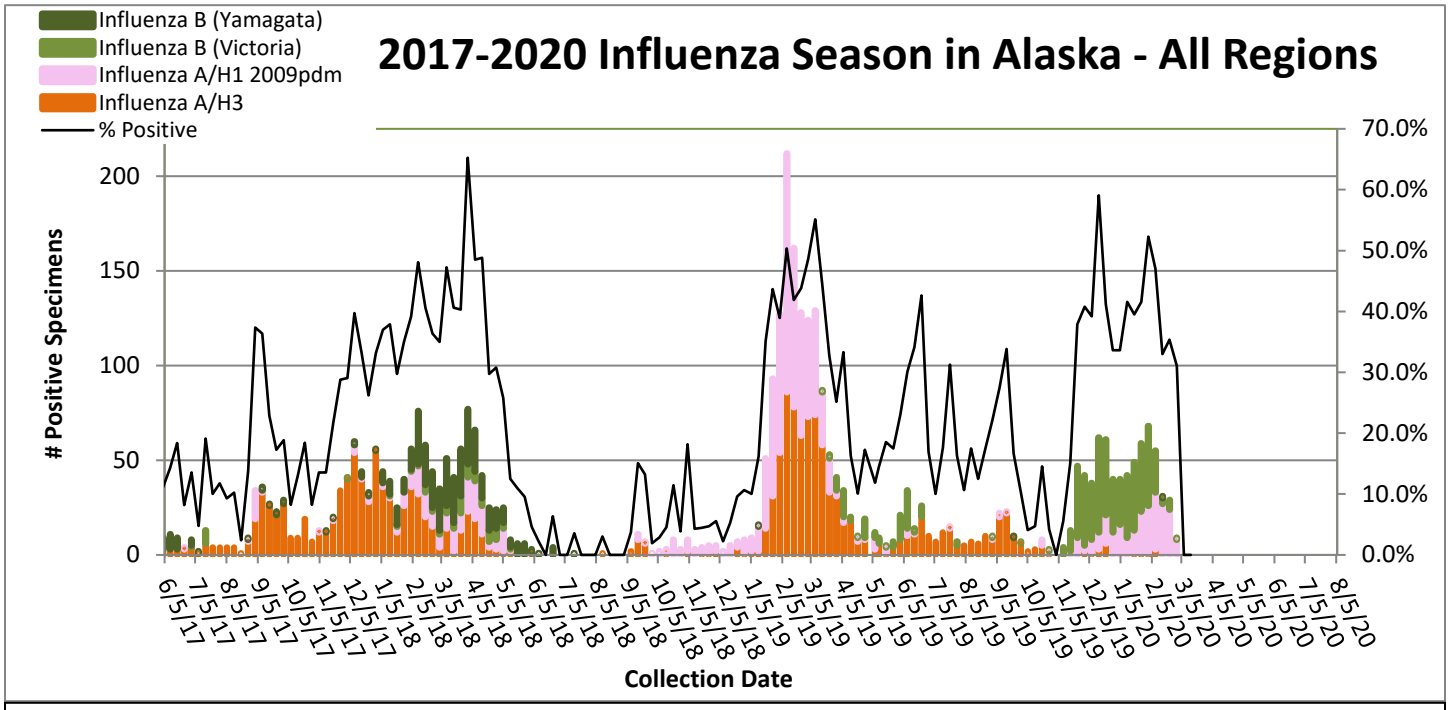
*LOW: Viruses that are not as well inhibited by the vaccine antibody are designated as "LOW" when performing antigenic characterizations. For more information, visit the weekly U.S. influenza surveillance report at https://www.cdc.gov/flu/weekly/index.htm.



For recent specimens collected in week #11 (March 8 - 14, 2020): 0 of 0 respiratory specimens were positive for influenza (0.0% positive). Additional specimens from this collection date range are pending due to transit delays or further subtyping, thus percent positivity will adjust as specimen results become available.

8. Respiratory Pathogen Panel Summary – by Region

Numbers reflect the total positives detected within a particular time period. Surveillance for respiratory pathogens was reduced in 2017, hence lower numbers for pathogens other than influenza and RSV after that time. Current respiratory season is 10/1/2019 – 9/30/2020. NT = Not tested
