

This is a draft version of the ICD-10 screen for Diagnosis in AKAIMS.

Please note that it is an early draft and will likely have changes before it is launched.

The screenshot displays the WITS interface for a client diagnosis. The header shows the user as 'Administrator, WITS' and the location as 'Administrative Agency, Admin Facility'. The client information is 'Client: Doe, John | M859696RB818110 | 1'. The main content area is titled 'Client Diagnosis' and includes an 'Edit Diagnosis' link. The diagnosis details section shows fields for Primary, Secondary, and Tertiary diagnoses, Effective Date (05/01/2015), Expiration Date, Time (12:30 PM), Diagnosing Clinician (Carroll, Tim), and GAF Score. Below this are three tables for Behavioral, Medical, and Psychosocial diagnoses, each with columns for Actions, Code, Description, Comment, and Principal. At the bottom, there is an 'Administrative Actions' section with a 'Review Prior Diagnosis' link and three buttons: 'Cancel', 'Save', and 'Finish'.
