

If a McKesson shipment was in transit for longer than 4 days*

A shipment from McKesson can be in transit until midnight on Day 4 (which is usually a Friday). If the shipment arrives before midnight on Day 4 and the temperature indicators are not activated, the vaccine is viable and can be stored and administered. If the shipment arrives to your facility **after** Day 4, follow the instructions below. The shipment will need to be evaluated and a reshipment may be issued.

- 1) Store vaccines appropriately in your refrigerator and label "Do not use"
- 2) Do **NOT** receive or reject any doses from the pending order in VacTrAK
- 3) Email izcoldchain@cdc.gov and vaccinedepot@alaska.gov the **same day** that you received the shipment and include these attachments:
 - Packing slip from inside the box (see Example 1 to the right)
 - This form

Facility Name:	
PIN: AKA	VacTrAK order #:
Ship Date (printed on the box address label; see Example 2 to the right):	
When was the shipment opened? Date:	Time:
Which temperature indicator is activated?	Warm marker <input type="checkbox"/> Freeze marker <input type="checkbox"/> None <input type="checkbox"/>

- 4) Wait for further instructions. CDC will probably ask McKesson to send you a reshipment. After the reshipment arrives at your facility, you will then electronically receive your order in VacTrAK. There is no need to submit a new vaccine order unless instructed by the Alaska Immunization Program
- 5) Return the doses deemed not viable from the original shipment to McKesson. McKesson will mail or email you a UPS postage-paid address label. Do not process a return in VacTrAK for these doses
