

What's New in VacTrAK as of 12/20/2017

VacTrAK implemented a new version (v5.17.5.5) that includes the following updates:

1. Coverage Rate Report Enhancements

- Run report for single vaccine and a specific date range
- Schedule options now include export and patient lists

2. Patient Active/Inactive Status

Patient Active/Inactive status is a designation for the relationship between patient and provider in VacTrAK for coverage assessments, reminder recall, and reports.

Patient Active/Inactive Status has been simplified in VacTrAK to only three choices (active, inactive, deceased) and a patient is active with (or “owned by”) only one provider at a time (which is usually where they last received an immunization).

Refer to updated guide: [Modifying Patient Status](#)

3. Manage Patient Population

New feature that gives sites the ability to manage patient lists for patients that are active with their facility (“ownership”) or have previously administered vaccines (“service”); for use in coverage assessments, reminder recall, and other reports in VacTrAK.

Refer to new guide: [Manage Patient Population](#)

4. Overseas military address codes

State codes **AE**, **AP** and **AA** for overseas military address codes (APO/FPO designations) have been added to VacTrAK.
