

What's New in VacTrAK as of 1/31/2017

VacTrAK implemented a new Forecast version (v5.17.1.1) that includes the following updates:

1. Added new vaccine (CVX) codes

- Rabies – IM Diploid cell culture (CVX 175, CPT 90675)
- Rabies – IM fibroblast culture (CVX 176, CPT 90675)
- Td (adult), absorbed (CVX 09, CPT 90714)

2. Hepatitis B (Hep B)

VacTrAK is now correctly forecasting the 4th dose of Hep B and series completion. VacTrAK is no longer showing due for a 5th dose or complete at the 3rd dose of Hep B.

3. Haemophilus influenza – (Hib (PRP-OMP))

VacTrAK is now forecasting Hib (PRP-OMP) or PedvaxHIB® according to ACIP schedule.

4. Meningococcal (MCV)

VacTrAK is now forecasting the booster dose at age 16-18 years for adolescents that receive Meningococcal doses administered at age 13-15 years.

5. Human Papilloma Virus (HPV)

VacTrAK is now forecasting HPV according to the 2-dose schedule per the updated ACIP Recommendations published in the 12/16/2016 [MMWR](#).

6. Pneumococcal (PCV13) forecast for patients ≥65 years old

VacTrAK is now forecasting for PCV13 for adults over age 65 years with the correct spacing after PPSV23 doses.

7. Known Forecast Issues in VacTrAK:

- **Zoster** is forecasting for adults **over age 60** years regardless of previous doses received at ages 50-59 years. There is not an ACIP recommendation for a second dose of zoster vaccine for anyone and *a fix is expected soon*.

Reminder: Always use clinical judgement in interpreting ACIP recommendations and forecast.
