

Alaska State Virology Laboratory (ASVL) Weekly Report – Week #5

January 28 – February 3, 2018

(This report was prepared by Jayme Parker, Public Health Microbiologist III at the Alaska State Virology Lab in Fairbanks, Alaska)

The Section of Epidemiology is the primary contact for consultation for the following potential active infections: rabies, norovirus, measles, mumps, rubella, varicella zoster, and novel influenza. Please direct your calls to the Epi-Team at 907-269-8000; or their 24 hour # 1-800-478-0084. **For information regarding mumps infections in Alaska, please visit:**

<http://dhss.alaska.gov/dph/Epi/id/Pages/Mumps.aspx>

1. Mumps virus

Specimens collected from patients with suspected mumps infections (or any vaccine preventable infection) are tested by the APHL/CDC Vaccine Preventable Disease Reference Center in California. If Mumps RNA is detected, genotyping is attempted at the California laboratory. Please see additional information regarding mumps and mumps genotypes at cdc.gov/mumps.

Collection Date Range: 6/28/2017 – 1/23/2018

# AK Specimens Tested by APHL/CDC Reference Center	Mumps RNA Detected	Genotype G
429	167 (38.9%)	93

*These mumps numbers are not the official numbers for the outbreak and only represent specimens routed through the Alaska State Public Health Laboratories. They are presented for illustrative purposes only and should not be reported in any external reports or media.

2. Influenza virus

PCR Testing for Week #2018-5 TP: true positive, FP: false positive, TN: true negative, FN: false negative. True = 2 tests concur, False = 2 tests do not concur Collection Date Range: 1/4/2018 – 1/29/2018		Corresponding Influenza Sentinel Providers Results								
		Rapid Influenza Test Results				PCR Test Results				No Data
ASVL PCR Results		TP	TN	FP	FN	TP	TN	FP	FN	
Influenza A/H1 2009 pdm Positive	5	4			1					
Influenza A/H3 Positive	25	22			3					
Influenza A (subtype pending)	1	1								
Influenza B Positive	12	8			4					
Influenza Negative	69		57	3						9
Influenza Inconclusive (PCR inhibitive)										
Total # Specimens Tested	112	35	57	3	8	0	0	0	0	9
Summary: Influenza vaccine strain match (specimens collected between 6/1/2017 – present)										
41 AK Specimens Tested by CDC	Results	Most closely related subtype				Match with 2017–2018 flu vaccine?				
27 Influenza A/H3 viruses	27 (100%)	A/HONG KONG/4801/2014-LIKE (H3N2)				Yes				
4 Influenza A/H1N1 viruses	4 (100%)	A/MICHIGAN/45/2015-LIKE (H1N1)pdm09				Yes				
4 Influenza B virus (Yamagata)	4 (100%)	B/PHUKET/3073/2013-LIKE				Yes; quadrivalent vaccines only				
6 Influenza B viruses (Victoria)	6 (100%)	B/BRISBANE/60/2008-LIKE				Yes				
Summary: Influenza antiviral resistance surveillance (specimens collected between 6/1/2017 – present)										
# AK Specimens Tested by CDC	Results	Description (Wild-type = susceptible to neuraminidase inhibitors)								
6 Influenza A/H3 viruses	6 (100%)	Wild-type neuraminidase gene sequence at amino acid positions 119, 292, and 294								

Alaska State Virology Laboratory (ASVL) Weekly Report – Week #5 January 28 – February 3, 2018

For recent specimens collected in week #5 (January 28 – February 3, 2018): 1 of 11 respiratory specimens were positive for influenza (9.1% positive). Additional specimens from this collection date range are pending due to transit delays or further subtyping, thus percent positivity will adjust as specimen results become available.

3. Hepatitis C virus (HCV)

For recommendations on types of Hepatitis C testing, test interpretation and post-test patient counseling:

- CDC MMWR: <http://www.cdc.gov/mmwr/preview/mmwrhtml/rr6104a1.htm>
- 5/27/15 AK Epidemiology Bulletin: http://www.epi.alaska.gov/bulletins/docs/b2015_11.pdf

HCV Antibody screening	Total Tested	Total Positive (%)
Week #2018-5	116	26 (22.4%)
Last 12 month period	5,975	802 (13.4%)
HCV RNA testing		
Week #2018-5	5	2 (40%)
Last 12 month period	872	593 (68.0%)

HCV Genotyping	Total Tested	Type 1a	Type 1b	Type 2a/c	Type 2b	Type 3	Type 4	Type 6	Unable to Genotype
Week #2018-5	2	1					1		
Last 12 month period*	593	338 (57.0%)	24 (4.0%)	4 (0.7%)	78 (13.2%)	126 (21.2%)	7 (1.2%)	0 (0.0%)	22 (3.7%)

*HCV genotyping data includes 6 coinfections (4 specimens with subtypes 1a & 3, 2 specimens with subtypes 1a & 2b)

Alaska State Virology Laboratory (ASVL) Weekly Report – Week #5 January 28 – February 3, 2018

4. Human Immunodeficiency virus (HIV)

HIV Antibody screening (4 th Generation)	Total Tested	Total Confirmed Positive
Week #2018-5	107	0 (0.0%)
Last 12 month period	7,883	15 (0.19%)

5. Norovirus Outbreaks

- No outbreaks to report.

6. Rabies virus - Human Exposures

- No new cases to report.

7. Respiratory Syncytial Virus (RSV)

*Surveillance of RSV using a PCR assay that does not differentiate groups A from B began 2/27/2017.

PCR testing	Total Tested	Total Positives (% pos)	Total Positive RSV A (% of pos)	Total Positive RSV B (% of pos)	Total Positive (RSV undifferentiated)*
Week #2018-5	131	16 (12.2%)	2 (12.5%)	0 (0.0%)	14 (87.5%)
Season 2017-2018 (current)	1,425	90 (6.3%)	3 (3.3%)	0 (0.0%)	87 (96.7%)
Season 2016-2017	5,550	383 (6.9%)	108 (28.2%)	158 (41.3%)	117 (30.5%)
Season 2015-2016	4,987	388 (7.8%)	145 (37.4%)	243 (62.6%)	0 (0.0%)

For recent specimens collected in week #5 (January 28 – February 3, 2018): 0 of 10 respiratory specimens was positive for RSV (0% positive). Additional specimens from this collection date range are pending due to transit delays, thus percent positivity will adjust as specimen results become available.

Alaska State Virology Laboratory (ASVL) Weekly Report – Week #5
January 28 – February 3, 2018

8. Respiratory Pathogen Panel Summary – by Region

Numbers reflect the total positives detected within a particular time period. Current respiratory season is 10/1/2017 – 9/30/2018. NT = Not tested
