

# Alaska State Virology Laboratory (ASVL) Weekly Report – Week #6

## February 4 - 10, 2018

*(This report was prepared by Jayme Parker, Public Health Microbiologist III at the Alaska State Virology Lab in Fairbanks, Alaska)*

The Section of Epidemiology is the primary contact for consultation for the following potential active infections: rabies, norovirus, measles, mumps, rubella, varicella zoster, and novel influenza. Please direct your calls to the Epi-Team at 907-269-8000; or their 24 hour # 1-800-478-0084. **For information regarding mumps infections in Alaska, please visit:**

<http://dhss.alaska.gov/dph/Epi/id/Pages/Mumps.aspx>

### 1. Mumps virus

Specimens collected from patients with suspected mumps infections (or any vaccine preventable infection) are tested by the APHL/CDC Vaccine Preventable Disease Reference Center in California. If Mumps RNA is detected, genotyping is attempted at the California laboratory. Please see additional information regarding mumps and mumps genotypes at [cdc.gov/mumps](http://cdc.gov/mumps).

Collection Date Range: 6/28/2017 – 1/25/2018

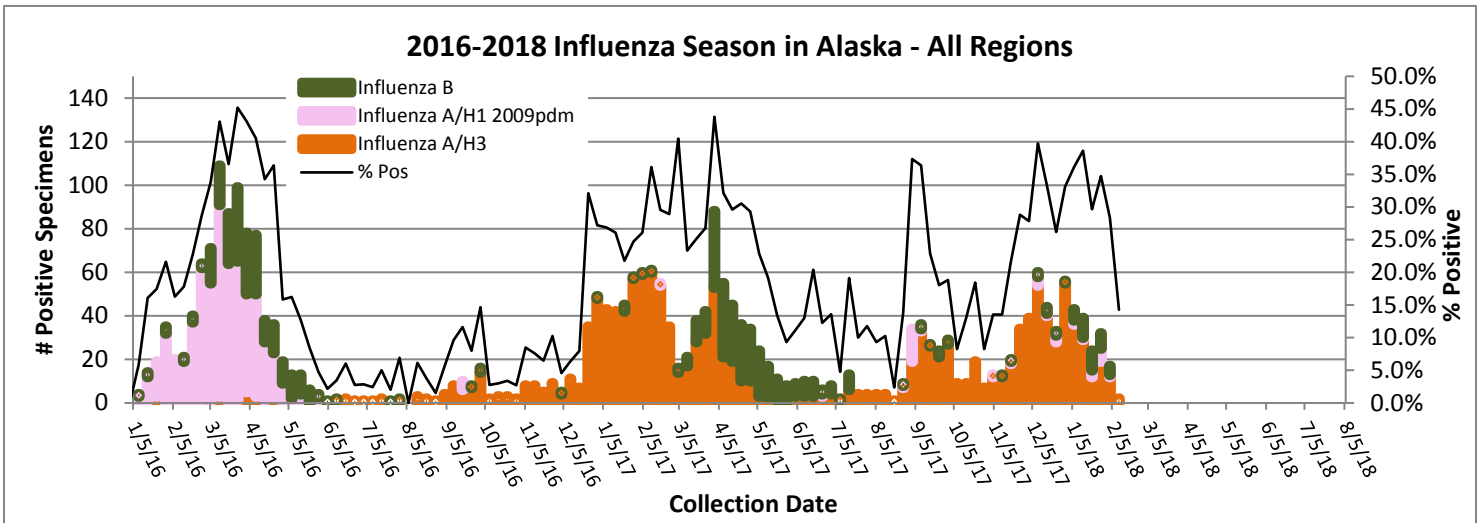

# AK Specimens Tested by APHL/CDC Reference Center	Mumps RNA Detected	Genotype G
479	188 (39.2%)	91

\*These mumps numbers are not the official numbers for the outbreak and only represent specimens routed through the Alaska State Public Health Laboratories. They are presented for illustrative purposes only and should not be reported in any external reports or media.

### 2. Influenza virus

PCR Testing for Week #2018-6 TP: true positive, FP: false positive, TN: true negative, FN: false negative. True = 2 tests concur, False = 2 tests do not concur  Collection Date Range: 1/17/2018 – 2/6/2018		Corresponding Influenza Sentinel Providers Results

1 Influenza A/H1N1 virus	1 (100%)	Wild-type neuraminidase gene sequence at amino acid positions 223 and 275								

**Alaska State Virology Laboratory (ASVL) Weekly Report – Week #6**  
**February 4 - 10, 2018**

For recent specimens collected in week #6 (February 4 - 10, 2018): 2 of 14 respiratory specimens were positive for influenza (14.3% positive). Additional specimens from this collection date range are pending due to transit delays or further subtyping, thus percent positivity will adjust as specimen results become available.

**3. Hepatitis C virus (HCV)**

For recommendations on types of Hepatitis C testing, test interpretation and post-test patient counseling:
