

Alaska State Virology Laboratory (ASVL) Weekly Report – Week #14

March 31 – April 6, 2019

(This report was prepared by Jayme Parker, Public Health Microbiologist III at the Alaska State Virology Lab in Fairbanks, Alaska)

The Section of Epidemiology is the primary contact for consultation for the following potential active infections: rabies, norovirus, measles, mumps, rubella, varicella zoster, and novel influenza. Please direct your calls to the Epi-Team at 907-269-8000; or their 24 hour # 1-800-478-0084.

1. Influenza virus

PCR Testing for Week #2019-14 TP: true positive, FP: false positive, TN: true negative, FN: false negative. True = 2 tests concur, False = 2 tests do not concur Collection Date Range: 2/7/2019 – 3/11/2019		Corresponding Influenza Sentinel Providers Results

0 Influenza B viruses (Victoria)										
Summary: Influenza antiviral resistance surveillance (specimens collected between 6/1/2018 – present)										
# AK Specimens Tested by CDC	Results	Description								
13 Influenza A/H3 virus	13 (100%)	Susceptible; wild-type neuraminidase gene sequence at amino acid positions 119, 292, and 294								
9 Influenza A/H1N1 virus	9 (100%)	Susceptible; wild-type neuraminidase gene sequence at amino acid positions 223 and 275								
0 Influenza B (Victoria)										
0 Influenza B (Yamagata)										

*Lower affinity: Viruses are characterized both by antigenic and genetic features. Antigenic matching refers to immunogenicity and similarity to the antibodies needed for virus neutralization which assigns the most closely related subtype. Genetic matching refers to similarities evident through whole genome sequencing and provides phylogenetic clade information. Although most influenza viruses circulating in Alaska antigenically match the current vaccine strain candidates, influenza A/H3 viruses from the 3C.3a clade have been shown to react poorly with antibodies produced by the vaccine in laboratory experiments. Nationally, the majority (67%) of influenza A/H3 viruses belong to this 3C.3a clade. For more information, visit the weekly U.S. influenza surveillance report at <https://www.cdc.gov/flu/weekly/index.htm>.

3. Human Immunodeficiency virus (HIV)

HIV Antibody screening (4 th Generation)	Total Tested	Total Confirmed Positive
Week #2019-14	192	0 (0.00%)
Last 12 month period	7,991	12 (0.15%)

4. Norovirus Outbreaks

- No new outbreaks to report.

5. Rabies virus - Human Exposures

- A dog from the northern region has tested **positive** for rabies.
- A wolf from the gulf coast region has tested **negative** for rabies.

6. Respiratory Syncytial Virus (RSV)

*Surveillance of RSV using a PCR assay that does not differentiate groups A from B began 2/27/2017. Seasons are calculated from October 1 – September 30.

PCR testing	Total Tested	Total Positives (% pos)	Total Positive RSV A (% of pos)	Total Positive RSV B (% of pos)	Total Positive (RSV undifferentiated)* (% of pos)
Week #2019-14	101	8 (7.9%)	0 (0.0%)	0 (0.0%)	8 (100.0%)
Season 2018-2019 (current)	1,766	350 (20.3%)	21 (6.0%)	0 (0.0%)	337 (94.1%)

Season 2015-2016	4,987	388 (7.8%)	145 (37.4%)	243 (62.6%)	0 (0.0%)

For recent specimens collected in week #14 (March 31 – April 6, 2019): 0 of 0 respiratory specimens was positive for RSV (0.0% positive). Additional specimens from this collection date range are pending due to transit delays, thus percent positivity will adjust as specimen results become available.
