

Alaska State Virology Laboratory (ASVL) Weekly Report – Week #17

April 21 - 27, 2019

(This report was prepared by Jayme Parker, Public Health Microbiologist III at the Alaska State Virology Lab in Fairbanks, Alaska)

The Section of Epidemiology is the primary contact for consultation for the following potential active infections: rabies, norovirus, measles, mumps, rubella, varicella zoster, and novel influenza. Please direct your calls to the Epi-Team at 907-269-8000; or their 24 hour # 1-800-478-0084.

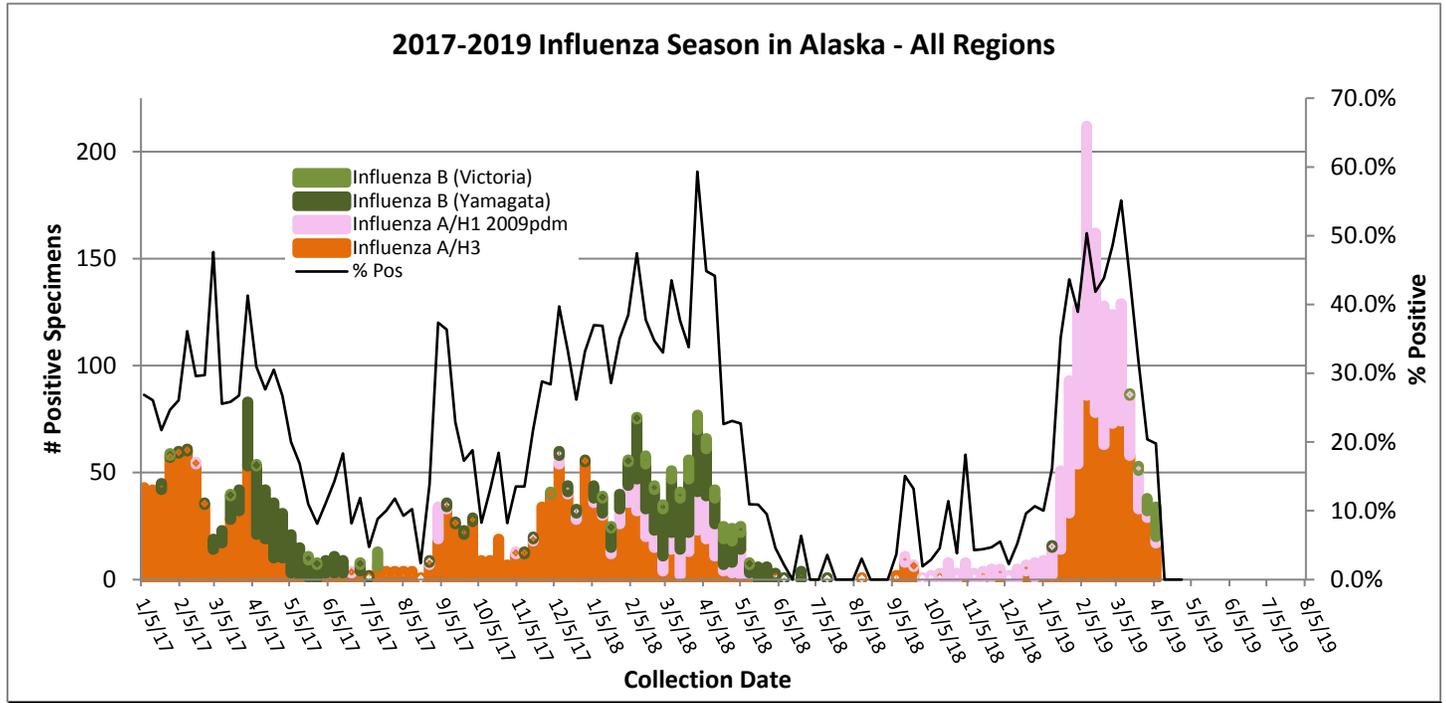

1. Influenza virus

PCR Testing for Week #2019-17 TP: true positive, FP: false positive, TN: true negative, FN: false negative. True = 2 tests concur, False = 2 tests do not concur Collection Date Range: 3/10/2019 – 4/22/2019		Corresponding Influenza Sentinel Providers Results								
ASVL PCR Results		Rapid Influenza Test Results				PCR Test Results				No Data
		TP	TN	FP	FN	TP	TN	FP	FN	
Influenza A/H1 2009 pdm Positive	21					20			1	
Influenza A/H3 Positive	80	6			1	69			2	2
Influenza A (subtype pending)	19					18				1
Influenza B Positive (Yamagata lineage)										
Influenza B Positive (Victoria lineage)	17					10			1	6
Influenza B (genotype pending)	18					12				6
Influenza Negative	241		20				184	2		35
Total # Specimens Tested	396	6	20	0	1	129	184	2	4	50
Summary: Influenza vaccine strain match (specimens collected between 6/1/2018 – present)										
# AK Specimens Tested by CDC	Results	Most closely related subtype			Clade	Match 2018–19 flu vaccine?				
22 Influenza A/H3 viruses	6 (27.3%)	A/SINGAPORE/INFIMH-16-0019/2016-LIKE (H3N2)			3C.2a	Yes				
	5 (22.7%)	A/SINGAPORE/INFIMH-16-0019/2016-LIKE (H3N2)			3C.2a1	Yes				
	11 (50.0%)	A/SINGAPORE/INFIMH-16-0019/2016-LIKE (H3N2)			3C.3a	Lower affinity*				
17 Influenza A/H1N1 viruses	17 (100%)	A/MICHIGAN/45/2015-LIKE (H1N1)pdm09			6B.1	Yes				
2 Influenza B virus (Yamagata)	2 (100%)	B/PHUKET/3073/2013-LIKE			Y3	Yes				
0 Influenza B viruses (Victoria)										
Summary: Influenza antiviral resistance surveillance (specimens collected between 6/1/2018 – present)										
# AK Specimens Tested by CDC	Results	Description								
15 Influenza A/H3 virus	15 (100%)	Susceptible; wild-type neuraminidase gene sequence at amino acid positions 119, 292, and 294								
10 Influenza A/H1N1 virus	10 (100%)	Susceptible; wild-type neuraminidase gene sequence at amino acid positions 223 and 275								
0 Influenza B (Victoria)										
0 Influenza B (Yamagata)										

*Lower affinity: Viruses are characterized both by antigenic and genetic features. Antigenic matching refers to immunogenicity and similarity to the antibodies needed for virus neutralization which assigns the most closely related subtype. Genetic matching refers to similarities evident through whole genome sequencing and provides phylogenetic clade information. Although most influenza viruses circulating in Alaska antigenically match the current vaccine strain candidates, influenza A/H3 viruses from the 3C.3a clade have been shown to react poorly with antibodies produced by the vaccine in laboratory experiments. Nationally, the majority (67%) of influenza A/H3 viruses belong to this 3C.3a clade. For more information, visit the weekly U.S. influenza surveillance report at <https://www.cdc.gov/flu/weekly/index.htm>.

Alaska State Virology Laboratory (ASVL) Weekly Report – Week #17

April 21 - 27, 2019

For recent specimens collected in week #17 (April 21 - 27, 2019): 0 of 4 respiratory specimens were positive for influenza (0.0% positive). Additional specimens from this collection date range are pending due to transit delays or further subtyping, thus percent positivity will adjust as specimen results become available.

2. Hepatitis C virus (HCV)

For recommendations on types of Hepatitis C testing, test interpretation and post-test patient counseling:

- CDC MMWR: <http://www.cdc.gov/mmwr/preview/mmwrhtml/rr6104a1.htm>
- 5/27/15 AK Epidemiology Bulletin: http://www.epi.alaska.gov/bulletins/docs/b2015_11.pdf

HCV Antibody screening	Total Tested	Total Positive (%)
Week #2019-17	156	34 (21.8%)
Last 12 month period	5,527	798 (14.4%)
HCV RNA testing		
Week #2019-17	35	20 (57.1%)
Last 12 month period	912	603 (66.1%)

HCV Genotyping	Total Tested	Type 1a	Type 1b	Type 2a/c	Type 2b	Type 3	Type 4	Type 6	Unable to Genotype
Week #2019-17	20	7	1		3	7			2
Last 12 month period*	603	380 (63.0%)	23 (3.8%)	3 (0.5%)	66 (10.9%)	114 (18.9%)	3 (0.5%)	0 (0.0%)	14 (2.3%)

*HCV genotyping data includes 1 coinfection (1 specimen with subtypes 1a & 3)

Alaska State Virology Laboratory (ASVL) Weekly Report – Week #17

April 21 - 27, 2019

3. Human Immunodeficiency virus (HIV)

HIV Antibody screening (4 th Generation)	Total Tested	Total Confirmed Positive
Week #2019-17	206	1 (0.49%)
Last 12 month period	7,987	13 (0.16%)

4. Norovirus Outbreaks

- No new outbreaks to report.

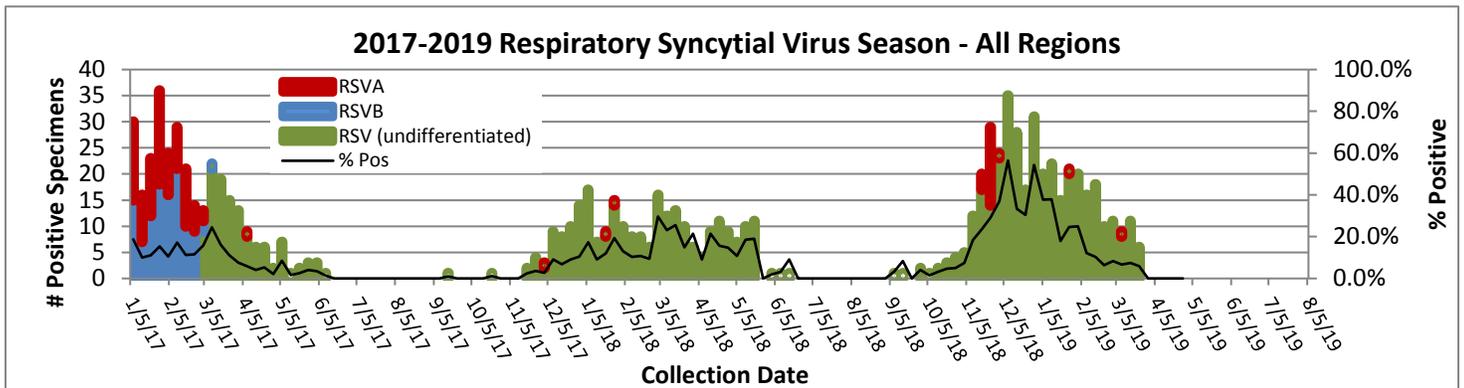

5. Rabies virus - Human Exposures

- A red fox from the northern region has tested **negative** for rabies.
- An arctic fox from the northern region has tested **positive** for rabies.

6. Respiratory Syncytial Virus (RSV)

*Surveillance of RSV using a PCR assay that does not differentiate groups A from B began 2/27/2017. Seasons are calculated from October 1 – September 30.

PCR testing	Total Tested	Total Positives (% pos)	Total Positive RSV A (% of pos)	Total Positive RSV B (% of pos)	Total Positive (RSV undifferentiated)* (% of pos)
Week #2019-17	184	9 (4.9%)	0 (0.0%)	0 (0.0%)	9 (100.0%)
Season 2018-2019 (current)	2,241	390 (17.4%)	21 (5.4%)	0 (0.0%)	369 (94.6%)
Season 2017-2018	2,952	256 (8.7%)	3 (1.2%)	0 (0.0%)	253 (98.8%)
Season 2016-2017	5,550	383 (6.9%)	108 (28.2%)	158 (41.3%)	117 (30.5%)
Season 2015-2016	4,987	388 (7.8%)	145 (37.4%)	243 (62.6%)	0 (0.0%)

For recent specimens collected in week #17 (April 21 - 27, 2019): 0 of 0 respiratory specimens was positive for RSV (0.0% positive). Additional specimens from this collection date range are pending due to transit delays, thus percent positivity will adjust as specimen results become available.
