

Alaska State Virology Laboratory (ASVL) Weekly Report – Week #23

June 2 - 8, 2019

(This report was prepared by Jayme Parker, Public Health Microbiologist III at the Alaska State Virology Lab in Fairbanks, Alaska)

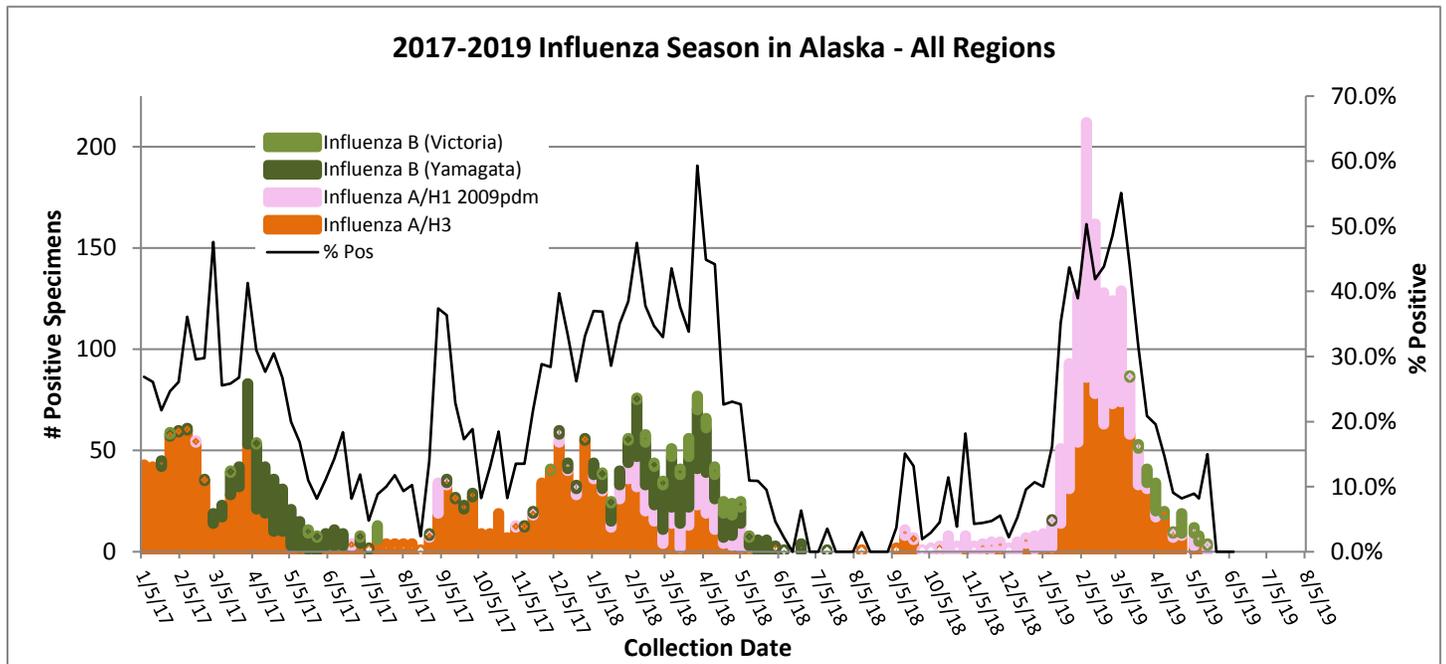

The Section of Epidemiology is the primary contact for consultation for the following potential active infections: rabies, norovirus, measles, mumps, rubella, varicella zoster, and novel influenza. Please direct your calls to the Epi-Team at 907-269-8000; or their 24 hour # 1-800-478-0084.

1. Influenza virus

PCR Testing for Week #2019-23 TP: true positive, FP: false positive, TN: true negative, FN: false negative. True = 2 tests concur, False = 2 tests do not concur Collection Date Range: 5/10/2019 – 5/27/2019		Corresponding Influenza Sentinel Providers Results								
ASVL PCR Results		Rapid Influenza Test Results				PCR Test Results				No Data

2 Influenza B viruses (Victoria)	2 (100%)	<i>[antigenic characterization not available]</i>				V1A-3del				
Summary: Influenza antiviral resistance surveillance (specimens collected between 6/1/2018 – present)										
# AK Specimens Tested by CDC	Results	Description								
15 Influenza A/H3 virus	15 (100%)	Susceptible; wild-type neuraminidase gene sequence at amino acid positions 119, 292, and 294								
10 Influenza A/H1N1 virus	10 (100%)	Susceptible; wild-type neuraminidase gene sequence at amino acid positions 223 and 275								
0 Influenza B (Victoria)										
0 Influenza B (Yamagata)										

*Lower affinity: Viruses are characterized both by antigenic and genetic features. Antigenic matching refers to immunogenicity and similarity to the antibodies needed for virus neutralization which assigns the most closely related subtype. Genetic matching refers to similarities evident through whole genome sequencing and provides phylogenetic clade information. Although most influenza viruses circulating in Alaska antigenically match the current vaccine strain candidates, influenza A/H3 viruses from the 3C.3a clade have been shown to react poorly with antibodies produced by the vaccine in laboratory experiments. Nationally, the majority (73%) of influenza A/H3 viruses belong to this 3C.3a clade. For more information, visit the weekly U.S. influenza surveillance report at <https://www.cdc.gov/flu/weekly/index.htm>.

Alaska State Virology Laboratory (ASVL) Weekly Report – Week #23
June 2 - 8, 2019

For recent specimens collected in week #23 (June 2 - 8, 2019): 0 of 0 respiratory specimens were positive for influenza (0.0% positive). Additional specimens from this collection date range are pending due to transit delays or further subtyping, thus percent positivity will adjust as specimen results become available.

2. Hepatitis C virus (HCV)
