

# Alaska State Virology Laboratory (ASVL) Weekly Report – Week #5

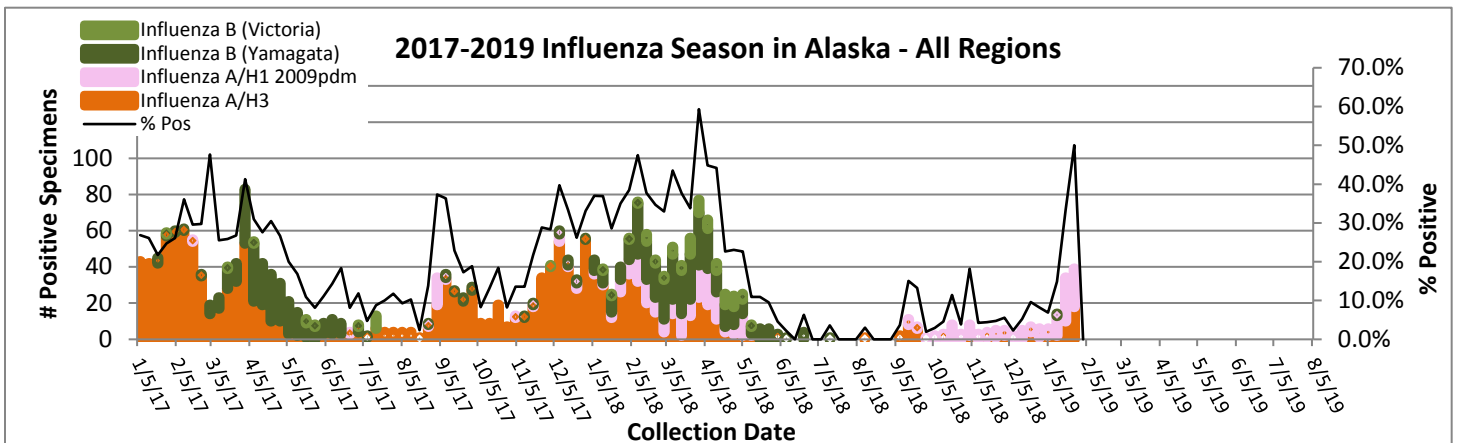

## January 27 - February 2, 2019

*(This report was prepared by Jayme Parker, Public Health Microbiologist III at the Alaska State Virology Lab in Fairbanks, Alaska)*

The Section of Epidemiology is the primary contact for consultation for the following potential active infections: rabies, norovirus, measles, mumps, rubella, varicella zoster, and novel influenza. Please direct your calls to the Epi-Team at 907-269-8000; or their 24 hour # 1-800-478-0084. **For information regarding mumps infections in Alaska, please visit: <http://dhss.alaska.gov/dph/Epi/id/Pages/Mumps.aspx>**

### 1. Influenza virus

PCR Testing for Week #2019-05 TP: true positive, FP: false positive, TN: true negative, FN: false negative. True = 2 tests concur, False = 2 tests do not concur		Corresponding Influenza Sentinel Providers Results

2 Influenza A/H1N1 virus	2 (100%)	Susceptible; wild-type neuraminidase gene sequence at amino acid positions 223 and 275								
0 Influenza B (Victoria)										
0 Influenza B (Yamagata)										

For recent specimens collected in week #5 (January 27 - February 2, 2019): 0 of 10 respiratory specimens were positive for influenza (0.0% positive). Additional specimens from this collection date range are pending due to transit delays or further subtyping, thus percent positivity will adjust as specimen results become available.
