

# Alaska State Virology Laboratory (ASVL) Weekly Report – Week #22

## May 24 - 30, 2020

*(This report was prepared by Jayme Parker, Public Health Microbiologist III at the Alaska State Virology Lab in Fairbanks, Alaska)*

The Section of Epidemiology is the primary contact for consultation for the following potential active infections: rabies, norovirus, measles, mumps, rubella, varicella zoster, novel influenza, or [novel coronavirus](#). Please direct your calls to the Epi-Team at 907-269-8000; or their 24 hour # 1-800-478-0084.

### 1. SARS-CoV-2 (COVID-19)

Total tested*	Total Specimens Tested	Total Positive Specimens (% positive)
Week 2020-22	3,347	65 (1.9%)
To date	17,875	280 (1.6%)

\*Total tested includes specimens processed at both the Anchorage Public Health Laboratory and the Alaska State Virology Laboratory.

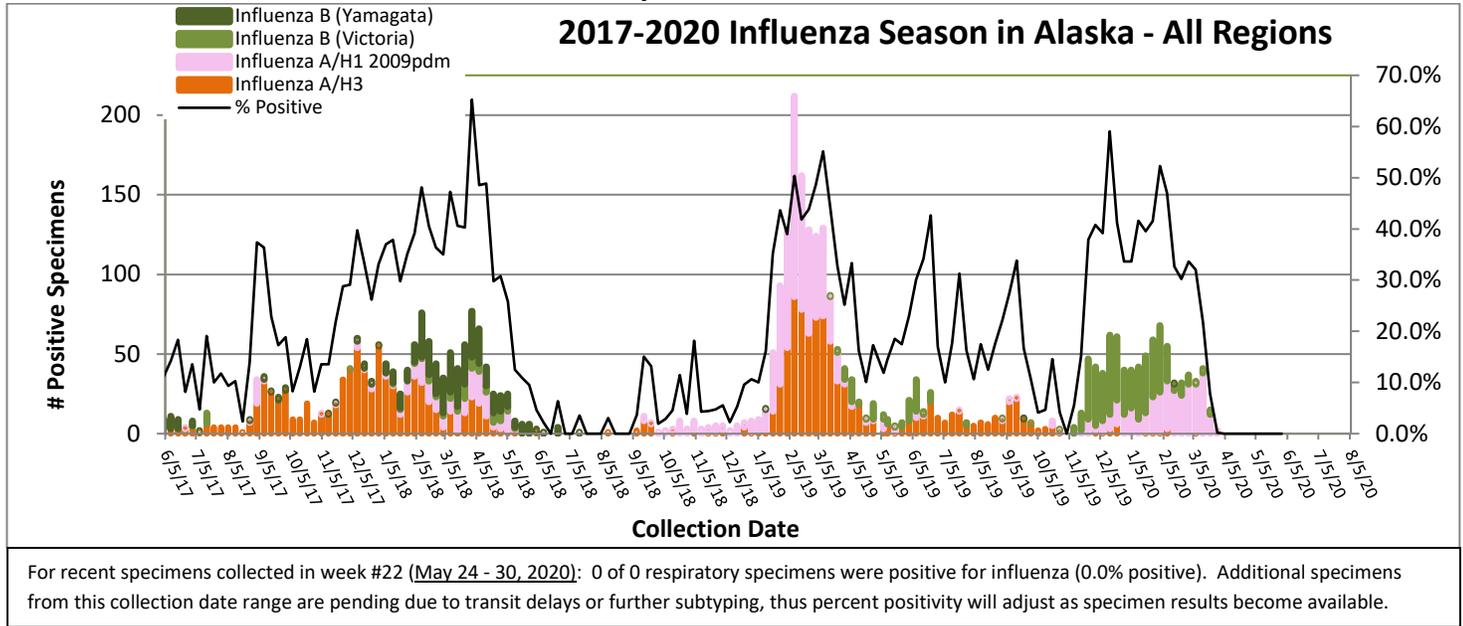

### 2. Influenza virus

PCR Testing for Week #2020-22 TP: true positive, FP: false positive, TN: true negative, FN: false negative. True = 2 tests concur, False = 2 tests do not concur  Collection Date Range: None tested	Corresponding Influenza Sentinel Providers Results

## May 24 - 30, 2020

### 5. Norovirus Outbreaks

- No new outbreaks to report.

### 6. Rabies virus - Human Exposures

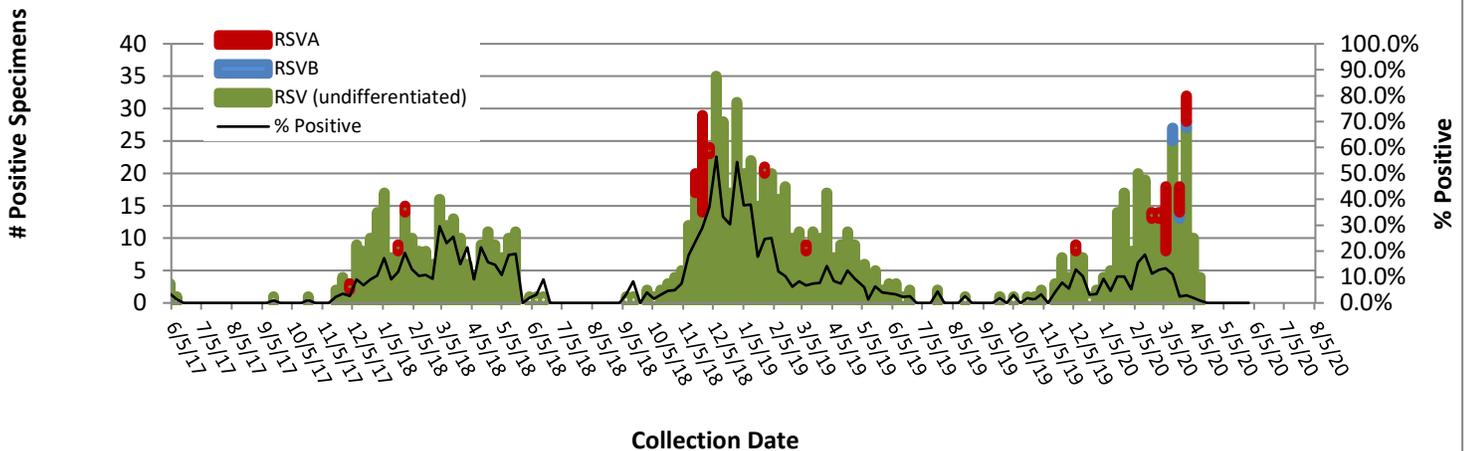

- No new cases to report.

### 7. Respiratory Syncytial Virus (RSV)

\*Surveillance of RSV using a PCR assay that does not differentiate groups A from B began 2/27/2017. Seasons are calculated from October 1 – September 30.

PCR testing	Total Tested	Total Positives (% pos)	Total Positive RSV A (% of pos)	Total Positive RSV B (% of pos)	Total Positive (RSV undifferentiated)* (% of pos)

**2017-2020 Respiratory Syncytial Virus Season - All Regions**

For recent specimens collected in week #22 (May 24 - 30, 2020): 0 of 0 respiratory specimens were positive for RSV (0.0% positive). Additional specimens from this collection date range are pending due to transit delays, thus percent positivity will adjust as specimen results become available.

**8. Respiratory Pathogen Panel Summary – by Region**

Numbers reflect the total positives detected within a particular time period. Surveillance for respiratory pathogens was reduced in 2017, hence lower numbers for pathogens other than influenza and RSV after that time. Total tested is the new specimens tested for the week; *other data may appear as testing backlogs from previous submissions are completed*. Current respiratory season is 10/1/2019 – 9/30/2020. NT = Not tested
