Is your family prepared?

Tsunami, earthquakes, wildfires, volcanic eruption, heavy snowfall, acts of terrorism and floods are disasters foremost in the minds of Alaskans today. Even though we all know what can happen … are we prepared? Disaster can strike quickly and without warning. Can we protect ourselves and our family? Do we have a plan? Where will your family be when disaster strikes? They could be anywhere — at home, at work, at school or on the road. Will you know if your children are safe? What if your child has special health care needs?

In an emergency, we all have to plan to be self-sufficient, and possibly spend several days without utilities, medical aid, transportation or communications. For Alaska families of children with special health care needs it can become even more difficult. Planning how you will respond is critical. It means extra attention to detail and needs that other families may not have to worry about. There is the need to have special equipment and medications on hand and to consult with health care providers just to name a few.

Families can cope with disaster by preparing in advance and working together as a team. Being prepared is your responsibility and best protection.

This guide is organized to assist you and your family in being prepared and ready.

Section one: Thinking ahead

A prepared family thinks ahead and knows what to prepare for. This section will assist you in thinking about possible disasters.

Section two: Disaster planning and preparation

Planning is critical to keeping your family safe. Families dealing with special health care needs require extra planning. This section will focus on planning and preparation.

Section three: Response and recovery

Plans will be put to a test when a disaster hits. There are many things for a family to consider when responding to a disaster and beginning the recovery process. This section will offer strategies to enable families to move from the disaster through the response and recovery.

Section four: Resources for families

Resources for more information and easy-to-access forms for your family to use during a disaster.
Section 1: Thinking ahead

Types of disaster

When discussing disaster preparation, most Alaska families think about earthquakes. In fact Alaskans should prepare for a variety of both natural and man-made disasters. This is also known as planning for an "all hazards" approach.

Natural disasters might include an earthquake, wildfires, floods, avalanches, volcanic eruptions, epidemic diseases, wind storms, blizzards or other weather related events. Other disasters can include community power or utility failure, an oil/fuel spill or be the result of terrorism or bioterrorism.

Alaskans should also be prepared for a major disease outbreak, causing limited access to health care, forcing strict hand washing and prevention practices or extended stays within the home or community because of quarantine.

Since disaster can come in many forms — weather, utilities outages (power, water or communication) terrorism, disease outbreak — it is important that your family understand how to put a disaster plan into action to cover a variety of situations or an "all hazards" approach. How will you communicate with your family in case of a disaster? Do you have a specially equipped vehicle or accessible transportation for your children and youth with special health care needs? Do you have access to an alternate electrical or power source? Now is the time to think about all potential situations and make sure you can adapt your plan to meet your family's needs.

Try to reflect on your child’s needs if there was:

- No water, electricity, telephone, heat, or refrigeration
- A lack of transportation
- Confinement to home or evacuation to a shelter or elsewhere
- Separation from family members
- No mobility aids
- No local access to prescription refills or health product supplies
- Limited health care access and emergency rescue services
Can you care for yourselves and your family member with special health care needs, without outside assistance, for 10 days?

Preparation is the key to surviving a disaster and managing the chaos that occurs afterwards. There are many tips for preparing for a disaster that are applicable to all families. In addition, families with special health care needs must be prepared to manage their needs under challenging conditions.

Do you have a disaster plan for your family? Does your plan include emergency strategies if your child is away at school, child care providers, caregivers, or church?

**At home**

- Teach children how and when to call 9-1-1 or your local emergency medical services number for emergency help.
- Have an emergency information form filled out on your child. One for home, for school and other child care providers.
- Have a disaster supply kit for your family.
- Meet with your family and discuss why you need to prepare for disaster. Explain the danger of fire and severe weather to children. Plan to share responsibilities and work together as a team.
- Discuss the types of disasters that are most likely to happen. As a family, discuss how this can affect all family members and how you will address the special needs of persons with a disability. Explain what to do in each case of disaster. Discuss preparation for common disasters, such as what to do in an earthquake (duck, cover & hold).
- Discuss what to do in an evacuation of your home, neighborhood and school. Practice using different ways out of a building, especially if you are above the first floor in a building with many stories.
- Draw a floor plan of your home. If possible, mark two escape routes from each room. Discuss who will be responsible for non-mobile family members and who will be responsible for those without challenges.
- Discuss with families how to operate your garage door when there is no electricity.
- Pick two places to meet in the event you are separated. You might pick outside your home in case of a sudden emergency such as a fire. Or if you can’t return home, you would pick some place outside of your neighborhood. Discuss with family and friends both the address of the meeting place and how to contact one another.
Consider designating an out-of-state family member, or close friend, that all your family can call/text to communicate (sometimes it is easier to make an out of state call or text than to call within the city or state). Everyone should carry your contact’s phone number in their wallet emergency card.

Show your small children pictures of emergency workers common to disaster scenes (such as workers in uniforms, in fire suits, and workers wearing protective face gear). Or, have communication card for non-verbal children.

Have working smoke and carbon monoxide detectors in your home. Have necessary resources such as a water hose and fire extinguishers.

Consider necessary back-up systems or plans for medical equipment that require electricity.

If planning to use a generator, know how to safely engage to prevent injury to power company personnel working to restore power.

Find the location of shut off valves and switches for utilities such as gas and electricity. Become familiar with how to operate them.

Check your home for materials and items that may pose a hazard during a disaster (don’t forget the outside).

Know your neighbor’s special skills (such as medical and technical) and how to help those families with special health care needs.

Meet with your neighbors to plan how you can work together after a disaster until help arrives. Set up a system with your neighbors to “signal” for needed help.

Teach your children who in the neighborhood can help them in the event there is a disaster and you cannot get home.

Plan how to take care of your pets and your service animal.

Make sure you have an extra set of keys for home, car, etc.

**Child care, school, church**

Find a method of communication and transportation for your child with special health care needs. Determine who will communicate with personnel if there is no interpreter. Make sure your child’s school, child care provider or other caregivers have more than one contact for your child.

Post emergency telephone numbers by phones (fire, police, ambulance, hospital, health care provider, poison control, etc).

Ask how emergency messages or instructions would be sent to you in case of a disaster. Include in the plan where and when to pick up your child.

Assist your child’s school, child care provider or other caregivers in developing an emergency care plan for your child. Some questions you want to ask include:

- Does the school have a disaster plan that includes meeting the needs of students with special health care needs?
- Does the school have disaster supply kits?
- Does the school have emergency contact information in case of a disaster?
- Does the school have the right medical equipment and medication for your child?
- Do they have extra medical equipment and extra medication if your child had to stay overnight?
- Do they have back-up systems or plans for medical equipment that require electricity?
Community

Find out whether your community has plans for persons with special health care needs.

- Notify the nearest fire station/emergency medical services or police department of your child's special health care needs
- Talk with other families who have a child with the same condition as your child. Share ideas and tips

Consult your child's health care provider

- If your child depends on dialysis, ventilation or other life sustaining treatment, talk with your child's doctor regarding the best place for him or her in the event there is a disaster. Find out the facility plans for emergencies and how your child will get treatment and medication.
- Obtain a list of medications from your child's health care provider
- Obtain a two-week supply of medications and supplies for your child. Have extra medication and supplies for your child's school and other childcare providers. Talk to your child's health care provider or pharmacist about what you should do if you do not have enough medicine after a disaster

Personal kit for child

Items your child should have at all times:

- Medical alert bracelet
- Contact information to reach parents
- If darkness such as blackouts or disaster drills in areas with poor lighting presents a communication problem for your child, they should carry a personal communication kit at all times:
  - Communication card
  - Flashlight
  - Paper
  - Pencil

Travel items

Have a disaster supply kit in your car, boat, or airplane. Don’t forget to include these items:

- Extra clothing and sturdy shoes
- Coats or jackets
- Hats, mittens, and scarves
- Sleeping bags or warm blankets
- First aid kit and manual
- Flashlight and extra batteries
- Fluorescent distress flag or road flares
- Booster/jumper cables
- Bottled water and non-perishable foods such as granola bars
Disaster supply kit

For families of children and youth with special health care needs

One way to prepare is by making a disaster supply kit. When a disaster hits, you won’t have time to shop or search for supplies. But if you’ve gathered supplies in advance, you and your family can handle an evacuation or home confinement.

Always be prepared to evacuate. Keep all of the items that you most will likely need during an evacuation in an easy-to-carry container such as a backpack or duffle bag. Keep the bag in an easy to reach place near the exit you most often use at your home.

* Items should be packed in preparation for an evacuation to a shelter

**Water**

Store water in plastic containers that have not had other liquids stored in them. Avoid containers such as cardboard milk cartons or glass bottles. A person needs to plan for one gallon per person each day. Children, nursing mothers, and many persons with special health care needs will require more. This amount will allow for about a half-gallon to drink and a half-gallon for personal cleanliness and cooking. Mark the water containers and change the water every six months.

- Keep at least a seven-day supply of water per person (one gallon per person per day for each person in your household for drinking, food preparation and sanitation)*

**Food**

Store at least a seven-day supply of non-perishable food per person per day. Select foods that require no refrigeration, preparation or cooking, and little or no water. If you must heat food, pack a can of sterno. Select food items that are compact and lightweight. Identify the storage date and replace stored food every six months.

- Ready-to-eat canned meats, fruits, and vegetables with pop tops
- Canned or boxed juices
- Staples (salt, sugar, pepper, spices, etc.)
- High-Energy foods such as raisins, peanut butter, or granola bars*
- Food for infants*
- Food that meets diets of individuals with special health care needs (such as pedialyte)*

**First aid supplies**

Put together a first aid kit for your home and consider one for the car. A basic first aid kit should include:

- Sterile adhesive bandages in assorted sizes (band-aids)
- Assorted sizes of safety pins
- Cleaning agent/soap including waterless alcohol based hand sanitizer/wipes
- Vinyl gloves (2 pairs)
- Cotton balls
- 2-inch and 4-inch sterile gauze pads (4-6)
- Triangular bandages (3)
- 2-inch or 3-inch sterile roller bandages (3 rolls)
- Eye dressing pads
- Scissors
- Tweezers
- Needles and thread
- Moistened towelettes/wipes
- Antiseptic
- Thermometer
- Tongue blades (2)
- Tube of petroleum jelly or other lubricant
- Hot and cold compress, or plastic bag for snow or ice
- Non-prescription medications in age appropriate doses for all family members:
  - Aspirin or aspirin free pain reliever
  - Anti-diarrhea medication
  - Antacid (for upset stomach)
- Toilet paper, towelettes
- Soap, liquid detergent (waterless, antibacterial)
- Feminine supplies
- Personal hygiene items
- Plastic garbage bags, ties (for personal sanitation)
- Plastic bucket with tight lid
- Disinfectant or household chlorine bleach
- Two week supply of all disposable supplies such as dressing materials, nasal cannulas, or suction catheters*
- Two week supply of all medications, prescription, and non-prescription*
- Generator or battery backup for all electrical medical equipment
- Copies of prescriptions for medical equipment and medications*
- Extra contact lenses and supplies or glasses (and copy of your prescription)*
- Extra batteries for hearing aids and communication devices*
- Special dietary foods and supplies*
- Manual wheelchairs and other necessary equipment as needed (cane, walker, etc.)*
- Extra medications, prescription, non-prescription & supplies for the school
- Pair of extra heavy gloves

Ask your physician or pharmacist about storing prescription medications that must be refrigerated. Have a cooler and ice on hand for this purpose.

- Formula-ready to eat or with sterile water for mixing*
- Diapers and wipes*
- Bottles*
- Powdered milk*
- Medications*
- Pacifiers*
- Favorite blanket or toy*
- Cups, plates, and plastic utensils
- Emergency preparedness manual
- Battery-operated radio with extra batteries
- Flashlight with extra batteries
- Non-electric can opener
- Utility knife
- Fire extinguisher-small canister ABC type
- Tube tent
- Pliers

* Items should be packed in preparation for an evacuation to a shelter
Duct tape

Matches in a waterproof container or lighter

Aluminum foil

Plastic storage containers

Signal flare

Paper, pencil, marker

Needles and thread

Shut-off wrench, to turn off household gas and water

Whistle to help signal for help

Plastic sheeting

Compass and map of the area

Non electric cooking utensils

Charcoal (for outside use only)

Helmet, goggles and masks

Include at least one complete change of clothing and foot wear per person appropriate for the season and conditions*

Long pants and long sleeve shirt

Sturdy shoes or work boots*

Jacket or coat

Rain gear

Sleeping bags or warm blankets

Hat, mittens and scarf

Games (card or board games)*

Books for all ages*

Copies of the following documents (stored in waterproof container)

Insurance policies*

Contracts & deeds*

Passports*

Social Security cards*

Immunization records*

Bank Account numbers*

Credit Card account numbers and companies*

Family records (birth, marriage, death certificates)*

Stocks and bonds*

Will*

Current photograph of each person living in the household*

Cash (small bills) and change*

Extra set of keys (car, house, etc)*

Medications and medical records (stored in a waterproof container)*

Current photos of your pets in case they get lost*

Information on feeding schedules, medical conditions, behavior problems, and the name and number of your veterinarian in case you have to foster or board your pets*

Sturdy leashes, harnesses, and/or carriers to transport pets safely and ensure that your animals can't escape*

Food, potable water, bowls, cat litter and pan*

Pet beds and toys, if easily transportable*

* Items should be packed in preparation for an evacuation to a shelter

Disaster preparedness for families of children and youth with special health care needs: Disaster planning and preparation
If disaster strikes....

- **Stay calm.** Check the area around you for safety
- **Check for fires, fire hazards and other household hazards.**
- **Check (smell) for gas leaks, starting at the water heater.** If you smell gas or suspect a gas leak, turn off the main gas valve, open windows, and get everyone outside quickly. Shut off any other damaged utilities. Do not turn off the gas unless you smell it, as you may not be able to turn it back on. The utility company will need to turn it back on for you.
- **Stay away from downed power lines.**
- **Clean up spilled medicines, bleaches, gasoline and other inflammable liquids immediately.**
- **Have injuries treated by a medical professional.**
- **Listen to your battery powered radio for news and instructions.**
- **Evacuate, if advised to do so.** Return only when local authorities advise that it is safe to do so.
- **Check for damage in your home.**
- **Use flashlights.** Do not light matches or turn on electrical switches if you think there may be damage to your home.
- **Call/text your family contact.** Do not use the telephone again unless it is a life-threatening emergency.
- **Check on your neighbors, especially elders or persons with disabilities.**
- **Put your pets in a safe place as they will be confused and scared and may be dangerous.**
- **Don’t get caught up in the “HYPE.”** Constant exposure to crisis or disaster pictures, news, and information can cause serious emotional issues for children. Limit your family’s time in front of the television and tune in for regular updates and alerts.
Simple tips to help you support your children and youth with special health care needs during difficult times

- **Have a plan and know what you will do.** It is the unknown that frightens most people. Most children and youth are more disturbed about what they think might happen than by reality. Planning makes the unknown easier for children.

- **Talk on a level that your child can understand.** Children of all ages will know or sense that something is wrong. Older children should be included in developing the family plan. They should also be encouraged to develop their own plan about things important to them. Younger children may not understand, but take the time to hold them and tell them how much you love them and that you will always do your best to care for and protect them. Singing and playing games they recognize can help calm them.

- **Give them information they need.** When a child asks how bad the expected disaster can be, such as an earthquake, you can compare it to others they may have experienced. If they see devastation on television explain to them what you will do if it is that bad. Have them talk about what they think they could do help protect themselves and their belongings. Talk about the plan and where you will be. Practice the plan to make everyone feel more comfortable. Have practice drills for “Duck, Cover, Hold” and fire evacuation.

- **Keep routines and regular schedule.** Routines reinforce to children that things will be staying the same for a while. They are comforted by doing what they are used to doing. This helps them understand that “life goes on.” Explain why and how the routine is changing.

- **Children with chronic medical conditions** such as asthma, allergies, or implanted devices should have a medical alert tag. This is especially important if they have a need that may not be obvious, such as diabetes. Teach your child to answer questions about their condition and treatment as soon as they are old enough. This will help ensure that others can care for them in your absence. Also, keep a health history information form on your child and make copies to keep with you.

- **Children with cognitive limitations** may respond to traumatic events based more on their observations of adult and peer emotions rather than the verbal explanations that they may receive. Discussions with them need to be specific, concrete and basic; it may be necessary to use pictures in explaining events and images. These children will need concrete information to help them understand that images of suffering and destruction are in the past, and that they are not going to hurt them.
• **Children with visual, hearing or physical limitations** will understand at their level of development, what is happening and may become frightened by the limitations their disability poses on them. They need to know that they are going to be safe and that they can find a safe place in an emergency. When explaining plans that may take them into unfamiliar territory, provide very simple and explicit explanations.

Children with visual impairments will need to have the area carefully described to them, while children challenged by physical or hearing impairments may need visual aids as to what they have to do and where they have to go.

• For children with hearing impairments, it is important to have a signer or interpreter near them. They need to know that someone will be there for them. For oral communicators, distance may be an issue as they may experience difficulty with lip reading. Darkness such as blackouts or disaster drills in areas with poor lighting, presents problems for children with communication needs. Your child should always carry their own personal kit including flashlight, pencil and paper. Make sure your child knows where they are kept.

• **Make sure children know what to do if you are not around.** If your child is old enough to talk, they should be taught your name. Older children should be taught their address, phone number, and your cell phone number. Make sure your children have some identification on them even if they are with you; such as those sold for shoe laces or an information card in their pocket on how to get a hold of you should you be separated. Ensure caregivers who may be in charge of children with special health care needs know the emergency plan in the event you are unable to return home.

• **Teach your children to recognize and accept help from emergency officials.** Make sure your children can recognize emergency officials, such as police, Red Cross, firemen, and others. Help them understand that if they are alone they can go to these people for help. It is important that they learn to NOT be afraid and hide from emergency officials. This can make locating them if they are separated from you more difficult. Children with special health care needs should carry a personal emergency kit which includes a flashlight and a whistle.
Resources on the web

http://www.alaska211.org
2-1-1 is an easy-to-remember telephone number that connects callers at no cost to information about critical health and human services available in communities around Alaska.

http://www.ak-prepared.com/
This site manages the State of Alaska’s role in disaster preparedness and response. Also provides emergency preparedness information to residents, including daily situation reports and advisories, disaster preparation check lists, mitigation information, and links to information about pandemic illnesses and other emergencies.

http://www.fema.gov/
The Federal Emergency Management Agency website has information in current and past disasters, applying for assistance, maps, and libraries of information and resources for disaster planning, response, and recovery. They also have a special website (http://www.fema.gov/kids/) just for kids.

Appendixes and forms

Appendix A: Family Emergency Plan

Keep a copy of this plan in your emergency supply kit or another safe place where you can access it in the event of a disaster.

http://www.aap.org/

Appendix B: Emergency Information Cards

Give to each family member of your family to make sure they know who to call and where to meet in case in an emergency.

http://www.ready.gov/

Appendix C: American Academy of Pediatrics Emergency Information form for Children with Special Needs

Work with your Health care Provider to complete the form. Make sure to keep a copy for yourself

http://www.ready.gov/
Make sure your family has a plan in case of an emergency. Before an emergency happens, sit down together and decide how you will get in contact with each other, where you will go and what you will do in an emergency. Keep a copy of this plan in your emergency supply kit or another safe place where you can access it in the event of a disaster.

</table>

Write down where your family spends the most time: work, school and other places you frequent. Schools, daycare providers, workplaces and apartment buildings should all have site-specific emergency plans that you and your family need to know about.

Work Location One
Address:  
Phone:  
Evacuation Location:  

Work Location Two
Address:  
Phone:  
Evacuation Location:  

Work Location Three
Address:

Family Emergency Plan

Make sure your family has a plan in case of an emergency. Fill out these cards and give one to each member of your family to make sure they know who to call and where to meet in case of an emergency.
