The state's maximum standard for this classification of children is no income test (all income is disregarded).

Income standard chosen

Individuals qualify under this classification under the following income standard:

- This classification does not use an income test (all income is disregarded).
- Another income standard higher than both the minimum income standard and the effective income level for this classification in the state plan as of March 23, 2010, converted to a MAGI equivalent.

Additional new age groups or reasonable classifications covered

If the state has <u>not</u> elected to cover the Adult Group (42 CFR 435.119), it may elect to cover additional new age groups or reasonable classifications that have not been covered previously. If the state covers the Adult Group, this additional option is not available, as the standard for the new age groups or classifications is lower than that used for mandatory coverage.

The state does not cover the Adult Group and elects the option to include in this eligibility group additional age groups or reasonable classifications that have not been covered previously in the state plan or under a Medicaid 1115 Demonstration. Any additional age groups or reasonable classifications not previously covered are restricted to the AFDC income standard from July 16, 1996, not converted to a MAGI-equivalent standard.
